## Foldable screen era to come

The 6-Gen LTPS flexible AMOLED production line began construction at Optics Valley in Wuhan on June 13. This high-end panel production line in China mainly focuses on producing a foldable screen for each smart phone.

The Wuhan China Star Optoelectronics Technology Co., Ltd has invested RMB 35 billion in this new production line. It is estimated that the line will become operational in 2019. At that time, when people use this kind of phone, it would be a tablet if opened and a phone if closed.
