# Striving to build cybersecurity industry city

After the functional orientation of the modern food industry and airport-based manufacturing industry, the Wuhan Airport Economic Development Zone (AEDZ) is taking up a historic new role as a cybersecurity industrial base. It is a heavy responsibility and entrustment and a glorious national mission. Considering the development history and current situation of each national development zone, it is a unique and clear goal to accelerate the construction of the first city of the national cybersecurity industry.

With such a precious opportunity at hand, we are the only one who can cultivate cybersecurity talent and strengthen the cybersecurity industry.

With the launch of six projects, the construction of the National Cybersecurity Talent and Innovation Base (NCTIB) is in full swing, marking a good start for AEDZ in the layout of the network information industry. For

the purpose of carrying out the strategic layout of the Wuhan Municipal People's Government and living up to the unique national development expectation of "cybersecurity institute plus innovation valley", AEDZ is striving to meet the new challenge by starting from scratch and progressing steadily.

The first city of cybersecurity is people-oriented. Cyberspace is the spiritual land of millions of people, so it is in the interests of the people to strengthen cybersecurity. The overall cybersecurity will be improved by developing a national cybersecurity base to build an open learning and exchange environment where new ideas will emerge through cooperation and interaction.

The first city of cybersecurity is talent-centered. Our national cyberspace talent cultivating system remains relatively backward. Therefore, by means of innovation, the Institute for State Cybersecurity will attract high-level

talent, and also develop reserve forces. The base will enhance openness and cooperation, strengthen system construction and competitive training to further improve the talent-professional strength and promote the research and development of core technology and the public education of cybersecurity.

The first city of cybersecurity is innovation-driven. During the first year after the settlement of the base in AEDZ, various construction projects are proceeding in an orderly manner. A number of domestic first-class colleges and universities are bringing in talent and running schools, and well-known enterprises and research institutions are racing to be a part of it. We believe that with the completion of all the projects, the settlement of talent, and the operation of enterprises, AEDZ will constantly produce outstanding achievements to serve the people, benefit the country and even the world.

THIS WEEK

## Policies to promote building competitive state cybersecurity "highland"

POLICIES 6-9

**Well-known companies settle in National Cybersecurity Talent and Innovation Base**

PROJECTS 10-11

**Institute for State Cybersecurity: cradle for Chinese talent in cybersecurity**

INSTITUTE 12-13
